

COMPILER

Compiler is a woman-owned software consultancy that's passionate about making government tech solutions easy-to-use and accessible for all.

Services

Custom Software Programming

Agile web application development using modern practices in product, design, security, and continuous delivery. We work with clients to prioritize outcomes-based feature development.

Human-centered Design & Development

User experience design that incorporates user research, user testing, application outcome metrics, accessibility requirements, and multiple language support for specific populations.

API Design & Development

Reliable integrations built to applicable data standards or specifications. Documented and open-source solutions prioritize agency needs such as integration of legacy systems with new cloud-native services or improvements to data quality and data management practices.

Data Pipelines and Warehousing

Data infrastructure architecture and development to support expanding access to key data resources for internal and external use. Support data publishing needs, data quality monitoring, and development of dashboards and tooling for data analysts/scientists.

Data Standards Development

Author schemas as machine readable open formats with robust validators that address real-world use cases. Collaborate with agencies and stakeholders to drive ecosystem maturity and public accountability on equity and transparency.

IT Staffing

Inclusive hiring practices and a wide network means our team can supplement yours with experienced agile UX/UI designers, product managers, software engineers, and data scientists.
